[Polynomial Representation Using Array Program](#)

---

**DOWNLOAD**

The coefficients and exponent of the polynomial are stored in a structure An array of such structure is used to represent a polynomial.. MULTIPLICATION OF TWO MATRICESPRINT TRANSPOSE OF A MATRIXPROGRAM TO PRINT IN LEXICOGRAPHIC ORDERPROGRAM FIND SUB STRING& ITS POSITIONPROGRAM TO CONCATENATE STRINGS PROGRAM TO FIND THE STUDENT INFORMATION & PRINT RANK SECURED IN ASCENDING ORDER.. PROGRAM TO MULTIPLY TWO SPARCE MATRICESPROGRAM TO FIND OCCURRENCES OF STRING IN PARAGRAPHPROGRAM TO REVERSESTRINGPROGRAM TO CONVERT A PREFIX EXPRESSION TO A POSTFIX USING POINTERSIMPLEMENT SINGLE LINKED LISTIMPLEMENT DOUBLE LINKED LIST.

Array representation assumes that the exponents of the given expression are arranged from 0 to the highest value (degree), which is represented by the subscript of the array beginning with 0.. The program takes two A polynomial thus may be represented using arrays or linked lists.

The image shows a code editor window with two tabs: 'poly\_add.c' and 'intro.c'. The 'intro.c' tab is active, displaying the following C code:

```
1  /**
2  * Welcome to InTechgrity.com
3  * The C & C++ Programming Section
4  */
5  #include<stdio.h>
6  #include<stdlib.h>
7
8  int main(void) {
9      printf("Hello World!");
10     return 0;
11 }
12
```

Overlaid on the code editor is a terminal window titled 'Terminal'. The terminal output is as follows:

```
Hello World!
-----
(program exited with code: 0)
Press return to continue
```

Below the code editor, there is a green cartoon character holding a globe and a pencil, standing on top of several documents with code snippets like '<?php', '<html>', and '</script>'. To the right of this character, the text 'C Program Source Code - InTechgrity.com' is displayed in a green, monospaced font.
